San Francisco.-J. A. Whitman left his home in New South Wales 20 years ago for desolate Kalgoorlie, in western Australia, with the determination of piling up a fortune, marrying the pret-tiest girl in his home district and living happily ever after. He meant to follow

the rainbow to its very end.

Other young men with the same kind of dream have left their bones to bleach

MRS. J. A. WITTMAN.

on desert sands, or returned crushed and broken after years of fruitless prospecting. Wittman courted success

and won it.

A few days ago he arrived here on the Moana on his way around the world. He has a fortune, the exact amount of which he hardly knows himself—a fortune dug out in large nuggets from the district known as Slugg hill. He also has a wife who after the and won it. hill. He also has a wife who after the desires of his youth, is young and

wittman is a bit grizzled from 18 years of mining in Kalgoorlie. He has his fortune and he has paid for it.

During the trip the Wittmans were the most unostentatious people aboard. The prospector has no desire to cut a wide swath

He is not going to charter any special trains.

cial trains.

He spoke lightly of the nuggets taken from his holdings in Slugg hill. Some of them ran up to 196 ounces and were worth \$20 an ounce. These specimens he presented to his wife when they were married in Perth a year ago. They are being preserved as souvenirs.

Trees Help Public Health.

Trees Heip Public Health.

From the Kansas City Star.

Men and animals have good reasons for their fondness for trees. It is not only because the trees add so much to the beauty of our streets, or because the attractiveness of rivers and lakes and even of the seashore depends largely upon the trees that we look upon them as silent friends. They help us in a more material way than with their beauty, great as that help may be. They add to our physical comfort and to our health.

The side of the street having the most trees is the popular side in summer. That is because it is the coolest by about 20 degrees, Mr. Farwell tells us, for "a full-grown trees sends out 187 gallons of water through its leaves into the air." Shading the ground also serves to moderate the heat. And the air around the trees is more pure. "The foliage takes in carbonic acid gas, which is poisonous to us, and gives out oxygen, which is healthful, indeed, indispensable to us." Medical authorities recognize that trees promote the healthfulness of a community.

The tempering effect of trees on the climate is not confined to summer. In winter they actually radiate heat, in addition to their benefits as windbreaks when planted in clumps and groves.

That it pays to have trees in the town and city and on the farmstead is shown by the fact that real estate on shaded streets and that on which trees are growing sells for a better price. No little of the welfare and prosperity of town, city or country depends upon its trees, "and there is a direct connection between the attractiveness of the village or of the home on the farm, and the love of the citizens for their village or of the children on the farm for their home."

A Railroad Across the Sahara. C. M. Keys in the World's Work

C. M. Keys in the World's Work. Up in Algeria, running down from the coast through Biskra to a little village called Tuggurt, is a French government line with a name and intentions that suggest something wonderful. It is called the Trans-Sahara railway. At the present time it is a little narrow guage road only 135 miles long. It is planned to cross the great Sahara desert and to reach ultimately Lake Chad on the northern border of Sahara desert and to reach ultimately Lake Chad on the northern border of Nigeria. The distance is 1,400 miles and the country through which the road would run apparently offers nothing to induce railroad buildng. On the face of it, it looks like an official railroad dream rather than like a real protect, but in these countries where row lect: but in those countries where gov ject; but in those countries where gernments build railroads, they seem be built sometimes without the slig est regard to traffic possibilities money making possibilities. possibilities or

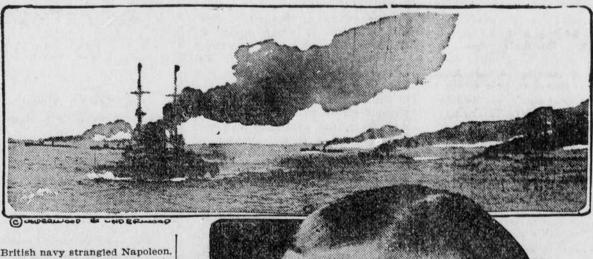

WROTE NOTE THAT **ENDED IN FIGHTING**

COUNT BERCHTOLD.

Count Berchtold, the prime minister of Austria, is the man who directed the diplomatic correspondence that re-sulted in the rupture with Servia and hot letters that have followed with

FOES OF GERMANY HOPE ENGLISH WARSHIPS CAN STRANGLE KAISER

The British navy strangled Napoleon. France and Russia hope that even in the event that their armies should meet the worst reverses at the hands of the German forces, the navy of Great Britain will plunge into the contest and strangle the kaiser by cutting off his food supplies. England has the most powerful navy

the world has ever known, enmasse and as to single great ships. The superdreadnaught Queen Mary and her sister the Tiger combine terrific fighting power and tremendous speed. Each carries ten guns of 13.5 caliber or over has nine-inch armor plate and makes over 28 knots an hour. The initial cost of the Queen Mary was \$10,125,750. of the Queen Mary was \$10,125,750. Great Britain has seventeen other superdreadnaughts. All carry ten guns of 13.5 caliber or over, and all make at least 28 knots an hour. The Lion and the Princess Royal are thirty-knot ships. All experts say that the English fleet should take command of the care of the c English fleet should take command of the sea at once and drive the German flag, both naval and commercial, from it. Germany has 24 dreadnaughts, including the old ones, but no ships in the superdreadnaught class.

Blockaded by sea and her food sup-jlies cut off from North and South South America and Russia, Germany would be forced to subsist from her own products and those of her ally

would be forced to subsist from her own products and those of her ally, Austria, which would be no easy task, since in normal years Germany imports about \$1,500,000 more of agricultural products and foodstuffs than she exports. Germany's exports have been chiefly chemicals, textiles, base metals, machinery and miscellaneous manufactures,

Above, an up-to-the-minute Englishwarship and torpedoboat flotilla; be-low, King George.

WORLD'S FATE HELD BY THE GREAT FLEETS: **SEA FIGHTS IMPORTANT**

Britain Will Have to Destroy German Fleet to Retain Mastery.

ALL POWERS ARE INVOLVED

United States Naval Expert Outlines Strength and Probable Cam-

following will be the probable general condition if all the world powers are condition if all the world powers are the condition in the Austro-Servian and was either destroyed or captured in the involved in the Austro-Servian and Russo-German wars: The English fleet in the North sea

will endeavor to destroy the German

This is absolutely necessary because England requires food stuffs from the United States and Canada, and to get them she will have to establish complete control of the sea so that com-merce may pass freely across the At-

French and German Plans.

The French navy undoubtedly will be assembled in the Mediterranean to op-pose the fleet of Austria. If successful, pose the fleet of Austria. If successful, the French will be able to prevent the transportation of troops across the Adriatic sea to the Balkan states.

The policy of Germany probably will be to hold her fleet behind fortifications until the land forces have been successful at the same time attacking.

successful, at the same time attacking the English battle fleet by means of torpedo vessels and submarines and reducing it so that the German fleet will more nearly equal it.

Might Invade England. When Germany has defeated Russia and France on land, her next move would be to engage the fleet of Eng-

It the latter should be beaten an invasion of England would follow.

It would not be necessary for Ger-It would not be necessary for Ger-many to attack the colonies of Eng-land. If the plans outlined above should

England would cause the colonies to fall like ripe apples into her lap. Germany might, in the first part of the war, endeavor by means of dread-nought cruisers so to harrass the commerce of England coming across the Atlantic that the food supplies of England would be reduced. These supplies are absolutely vital to Eng-land because she is not self-sustaining. In order to save herself from starvation the English fleet must hold German fleet closely to German waters. And English dreadnought cruisers must cruise along the European end of

the commerce lanes. Fixes Scene of Battle.

The operations of German battle cruisers independently on the commer-cial fleet of England would be limited because of the necessity of returning to German ports for coal. All opera-tions consequently will take place in

the eastern Atlantic.

It is not anticipated that the German navy will be able to cut the cables connecting England with Canada or the United States in the initial stages of the war. But this will certainly fol-low if the German fleet should be successful in the second stage of the war in driving in or defeating the main English fleet.

Work for French Fleet.

The English battle fleet in the Mediterranean probably will be withdrawn to the North sea of English channel, leaving the defense of the Mediterranean to the French entirely. The English will retain their torpedo destroyers and submarines at Gibraldestroyers and submarines at Gibraltar, and thus prevent a possible junc-

tion by the Germans with the Austrians and Italians.

But, as stated, the Germans in all probability would not leave their home waters, relying on their allies to control the situation in the Mediterranean.

I consider the German fleet for its size to be in a more efficient condition than the English fleet. Its gunnery practice is excellent, being the main part of efficiency. The homogeneity of the vessels is better than the English fleet is larger and in good condition.

Have charged it with lack of efficiency. Individual employers are learning that high efficiency goes only with contentment on the part of employes, with a sense of security in their jobs and their future. What is true of the factory workman is true of the school teacher. Cease to make teachers in tellectual proletarians—men without possessions, without hopes, without promise in the future—and their efficiency will go up.

The Railroad Scrap Heap.

From the Indianapolis News.

"Safety first" as a railroad axiom and

good condition. good condition.

The only way Germany can equalize numbers is by making night attacks with destroyers and submarines on the other railroad device that could not be a submarine of the could be reliable to the railroad device and in indicate the could not be reliable as the could not be reliable as the reliable and in indicate the reliable and with destroyers and submarines on the main English fleet, which will be forced to remain at sea to control the commerce lanes. Naturally such night attacks will affect the morals of the English and make them less efficient to withstand the final battle attack.

Socialism Demoralizes French.

By a Member of the General Board of the United States Navy.
Washington—Regarded from the naval point of view, I consider the Collowing will be the probable general eral of their naval vessels.

war with Japan. Since that war Russia has not been Since that war Russia has not been able to add materially to her fleet. The Russian navy was in a bad moral con-dition during the Japanese war and it has not improved in this respect. Therefore the chief naval defense in

Europe for the triple entente will rest Japan has an exceedingly efficient

navy. Under her alliance with England she will take up arms against Germany, reducing Kiao Chou, the German fortress on the Shang-Tung Peninsula China, and seizing other German islands in the Pacific.

One Side to Grab Turkey.

One Side to Grab Turkey.

The whole aim and object of the war, leaving out minor details, resolves itself into the following single point:

Who will control the Dardanelles? If the triple alliance should be successful Austria will advance her territory directly to the Turkish straits.

If, on the other hand, the triple entente should be successful Russia will gain this coveted point, and probably absorb most of the Balkan states, Turkey being swent over into Asia Minor.

absorb most of the Balkan states, Tur-key being swept over into Asla Minor. England will not like Russian acqui-sition of Constantinople but cannot help herself, because at the end of a successful war a large part of the Rus-sian army will be in complete posses-sion of that territory. Russia thereby will have gained her long-sought outlet on the Mediterranean which England for centuries has prevented.

be successful, German's occupation of England would cause the colonies to fall like ripe apples into her lap.

Germany might, in the first part of cause such possession will enable hoscommand of the routes to Egyp and India and the rest of the far east.

Sweating the Schoolmaster.

Nations are made by their schoolmasters. The school is the molder of national character, the teacher the molder of a nation's ideals. The power of the teacher wanes, however, and education loses in effectiveness when pupils, instead of respecting their preceptors, grow cynical towards them.

Such a situation now exists in the United States and is perliing our educational system, according to speakers at the convention of the National Education association. What respect can a student have for a college instructor who gets a salary that is often no bigger than the allowance this student gets from his parents for "incidental" expenses? How can the student take the professor seriously or be inspired by his ideals when he knows the salary of a clerk in his father's office? The professor, too, has less confidence in himself when he comes before his class in a coat that shines from too prolonged wear.

The salaries of professors and teachers,

a coat that shines from too prolonged wear.

The salaries of professors and teachers, in view of the high cost of living, are in effectiveness just about one-half what they were 20 years ago, according to President Dabney of the University of Cincinnati, who addressed the association. It is useless to expect men of greater ability to enter the teaching profession in view of such an economic predicament. No matter how strong a love a man may cherish for the profession he will think twice before entering it. No one likes to enter a field of endeavor that makes no provision for old age—save a Carnegie pension.

provision for old age—save a Carregie pension.
We have been finding fault a good deal of late with our educational system. We

example has become popular property, and great good it has done. There is angreat service in private and in individual

and great good it has done. There is another railroad device that could be of great service in private and in individual affairs if we did but apply it with the perserverance which is the root of its efficiency. It is the "scrap heap." A few years ago railroads began to consider the scrap heap as a possible source of revenue. Examination proved that a good deal of salable material could be reclaimed from such heaps, and scrap docks or reclaiming shops were established as collection centers. When these revealed the amount of material that manifestly could be reclaimed, they gave way to permanent buildings with machinery to facilitate the work, and now complete establishments of this kind are in operation on many roads.

In one shop near Chicago there were handled last year 143,142 tons of scrap at a cost of \$50,063. The scrap sales amounted to \$1,000,000, while the value of the material reclaimed from the scrap was \$421,497. This was handled and made serviceable for \$63,766, or at a rate of cost of \$12.76 for each \$100 reclaimed. Among the important items saved in this one plant during the year were 2,307,354 bolts of various kinds and sizes; 140 tons of nuts; 1,110 kegs of spikes; 3,500 track shovels and 600 scoops. There were also switch stands, couplings, hose and fittings, brake beams, jacks and drills, trucks and wheelbarrows, etc., to the value of \$50,000, besides 4,500 steel wheels for re-tiring, and 20,000 tons of round and flat iron recovered for re-roiling. But the reclamation of old and worn material is by no means all that comes from this system. A great and important element is the replacement of defective material. All material is carefully inspected before it is sold as scrap and a good deal of it is found to have makers' defects. These are set aside and inspected by representatives of the concerns selling them and on being passed are replaced, and thus a vast saving to the road is effected.

The poor man will never get ahead as he ought until he learns thoroughly the lesson contained in the "scra

Old-Time Lamentations. From the Milwaukee Journal

Old-Time Lamentations.

From the Milwaukee Journal.

A few financiers of the old school, among whom is Mr. George R. Sheldon, treasurer of the North American company, who cling to high tariff ideas, refuse to read the signs of the times and think that a manufacturer should not hazard a move without a huge tariff to give him a cast iron hold on the home market, say that the country cannot have prosperity until the republican party is put back into power and high tariff restored.

The president of the United Shor Machinery company, who, through leased machinery, has an accurate gauge on the shoe industry, says that the country is on the eve of the greatest boom ever known. Many other leaders in business express similarly optimistic views. The Steel corporation has recently added 5 per cent to its working force and is running at 70 per cent of capacity. Hundreds of instances of busier manufacturers and merchants in the last few weeks might be cited. Yet despite improving times, the magnates sigh for the old tariff fieshpots which will never return.

During the recent strike workers in the highly protected textile industries of Lawrence, Mass. testified that they could not earn a living wage by laboring the longest days. Steel workers, in one of the best protected industries, long worked seven days in the week, and the 12-hour day is still common. The wage is so low that a semblance to a living wage cannot be earned in a day less than 12 hours, and workmen themselves cling to the long day.

The tariff proposed to help the work-men. But high torities.

and workmen themselves cling to the long day.

The tariff proposed to help the workmen. But high tariffs have meant the fat dividend and the lean wage. The manufacturer, with an unlimited supply of labor under a liberal immigration law, has pounded the wage down and shoved all the excess tariff profits into his own pocket. When anyone made an assault on this "easy money," the manufacturer emitted a howl that could be heard across the country.

WOULD MAKE A POLITICIAN

Little Willie's Capacity for Sticking to One Idea Singularly Like Way of Rabid Partisan.

"The late Adlal E. Stevenson," said a Republican leader of Bloomington, "hadn't, after all, much use for politics. He once explained to me why this was.

"He said that party politicians believed their side to be always right. and the other side to be always wrong. Whatever the other side advocated, it was horrible and infernal; whatever their own side advocated was holy.

"He said the partisan couldn't understand that you might arrive at the right thing by more ways than oneand thus the partisan was like the urchin whose teacher said:

"'Willie, what does six plus four

"'Eleven.'

"'No. Try again.'

" 'Twelve.'

" 'No.' " 'Thirteen.'

"'No, no, no. You're just guessing. But why couldn't you have guessed that six plus four makes ten?'

'Because it don't make ten,' said Willie. 'Five and five makes ten-I remember that."

No Menace In Sanatorium.

Dr. Edward L. Trudeau, who built the first tuberculosis sanatorium in the United States in 1885, says:

"When I bought the first land on which the Adirondack Cottage sanatorium is built, I paid \$25 an acre for it, but the price was then thought absurdly high. My last purchase of five acres cost me \$5,000. To my knowledge, there has never been an employe who came to the sanatorium in sound health who developed tuberculosis while there; and a sanatorium can no more endanger the health of the neighborhood in which it is built, even if the residences are at its very gates, than it could if it were placed on top of a high mountain miles away from habitation."

Never refuse to marry a girl because her father is rich. It is false modesty.

Backache Is a Warning

Nature always gives fair warning when-ever anything is going wrong inside the body. When warned of kidney weakness by an aching back or disordered urination, give the kidneys prompt help and avoid more serious troubles.

Midney trouble is a dangerous thing, be-cause the kidneys are the blood filters, and weak kidneys soon upset the healthless system, causing rheumatic attacks, gravel, dropsy and Bright's disease.

Doan's Kidney Pills is a most reliable kid-ney remedy Doan's are used successfully all over the civilized world and publicly rec-ommended by thousands of grateful people.
